Native Plant Benefits

How native plant projects help humans and the environment.

Soil Stabilization

Native plants have deep, dense intertwined root systems that physically strengthen soil & stabilize banks from erosion. During wet periods plants remove excess moisture adding resistance to erosion or slumping.

Clean Water

Deep rooted vegetation intercepts rain water runoff through uptake, collection, and filtration of many nutrients, soil particles, and other pollutants.

Fish and Wildlife Habitat

Areas of diverse shoreland vegetation both on shore and within the water provide shade, shelter, and travel corridors for fish and wildlife.

Help for Our Pollinators

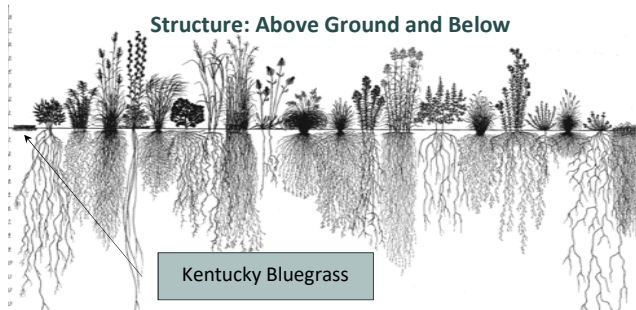

Pollinators need our help! There is increasing evidence that many pollinators and their habitats are in decline. Native plants provide nectar for birds, bats & beneficial insects.

Low Maintenance

Once established, native plants are as maintenance free as can be - no fertilizer or chemicals and little mowing.

Added Beauty

Native plants add beauty, habitat, and biodiversity with an array of colors and textures throughout the seasons.

Tips to Remember When Planting

- ⇒ Determine your site's soil texture and sunlight availability and choose plants accordingly.
- ⇒ Site preparation is important for the success of your planting, contact the Koochiching SWCD office if additional instruction is needed
- ⇒ Root depth is important for soil stability and erosion prevention.

See pricing details below. Payment must accompany your order; additional plants may be available upon request. Species substitutions may be necessary due to site characteristics, soil moisture, plant availability, or other considerations. Due to circumstances beyond our control, Koochiching SWCD is not able to guarantee the survival of plant material.
